

POWER ON
connections

Your electricity and fibre
connections partner

Company profile

A proven history...

Power On Connections is the UK's leading Independent Connections Provider (ICP), delivering innovative, efficient, competitive and compliant new electricity and fibre connections for even the most complex projects.

We are your electricity and fibre connections partner. We don't just process applications – we work with our customers to develop solutions together – providing a tailored service from inception through to final adoption, through our group's regulated Independent Distribution Network Operator (IDNO) licence.

Knowledge and experience...

Since our inception, we continue to be pioneers in changing the shape of the connections marketplace. It is the calibre, expertise and experience of Power On Connections people that keeps us first for innovation and performance.

Our team passionately defends and maintains our position as the leading Independent Connections Provider in the UK, and continually looks for new 'firsts' and more ways to drive standards and capabilities even higher.

A unique position...

We are part of a group of companies who, collectively are the UK's leading provider of energy infrastructure to the new connections market. The group owns and operates over 30,000 discrete networks, serving over one million homes nationwide.

As the UK's strongest multi-utility provider, we are able to provide the full range of utility infrastructure products and services::

- ▶ Electricity
- ▶ Fibre-to-the-Premise
- ▶ Gas
- ▶ Water & Wastewater
- ▶ District Energy

Core Values

Our Customers

- ▶ Consistently delivering excellent service and exceeding customers' expectations
- ▶ Motivated, competent and attentive teams focused on the customers' needs

Programme Certainty

- ▶ Ability to undertake all works with minimal, if any, DNO intervention
- ▶ Clearly defined and accountable construction programmes

Speed of Response

- ▶ Proactive from enquiry to completion to maintain schedules and service
- ▶ Experienced, skilled, flexible to respond and react quickly

Cost Certainty

- ▶ Fixed price quotations with enhanced value engineering solutions
- ▶ Staged payments phased over key project milestones for financial efficiency

Sectors

Our Services

Designed to be different...

We can design, deliver and adopt electricity distribution networks, arranging for their long-term ownership through our group's regulated Independent Distribution Network Operator (IDNO) licence. This brings many additional benefits to our customers including vastly enhanced control of the connection programme and phased energisations. The removal of the DNO from the critical path also leads to greater efficiency in the co-ordination of the project and legal processes

Consistently over **80%** of our work is repeat business from highly satisfied customers – a statistic we are immensely proud of.

Fully compliant...

We are a NERS (National Electricity Registration Scheme) accredited provider, and were the first company in the UK to gain full accreditation under the new two stage scheme for ICPs, which is assessed by Lloyd's Register. Our company is CHAS (Contractors Health and Safety Assessment Scheme) registered.

Self-Accreditation...

Accredited to carry out self-determination, we can ascertain the nearest point of connection ourselves which speeds up the process considerably. We can also self-approve designs in-house, providing a complete 'one stop shop' and are accredited to undertake self-connection works. In short, we have all it takes to deliver your requirements without relying upon the incumbent DNO to energise your connection.

At a glance...

- ▶ New electricity connections – High Voltage (HV) or large Low Voltage (LV) supplies
- ▶ Accredited to conduct self-determination in most DNO regions by ascertaining the nearest point of connection
- ▶ Value engineering with in-house self-connection works
- ▶ Undertake all offsite and onsite works with the comprehensive engagement of local authorities and other key stakeholders
- ▶ Long-term ownership and operation of networks
- ▶ Ultrafast Fibre-to-the-Premise (FTTP) networks on residential developments

Fibre-to-the-Premise

**UltraStream
300**
Faster for less

UltraStream300, one of the UK's fastest fibre broadband and telecoms network

solutions for housing and high-rise residential developments. This is pure, Fibre-to-the-Premise (FTTP) technology – end-to-end, which is flexible to meet homes current and future demand.

With UltraStream300, contractors provide a superior fibre solution, complete with Fibre Integrated Reception System (FIRS), from just one supplier and typically under budget. Installation is straightforward with a streamlined, hassle-free process minimising risk and delay throughout. Fibre-ready homes are handed over on time to your client and with no on-going maintenance charges.

UltraStream300 makes it easy to add value to every project – without adding a penny more:

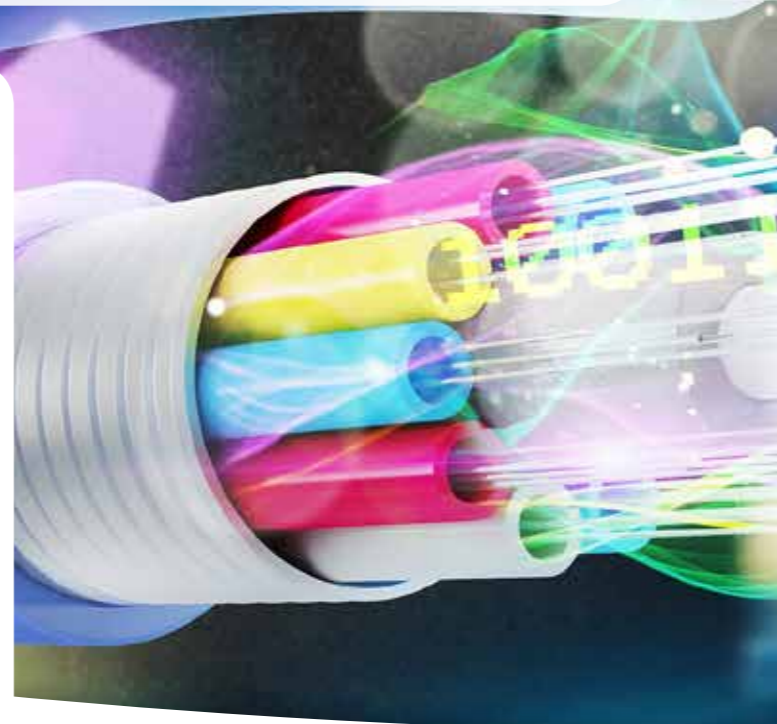

- ▶ One of the UK's fastest – Fibre broadband solutions delivering 300Mbps*
- ▶ End-to-end Fibre – for top performance and reliability
- ▶ Fibre-ready homes – phone and broadband live when homeowners move in
- ▶ Fibre Integrated Reception System (FIRS) option – providing satellite and free to air TV/Radio
- ▶ Network rebate models – developer receives either a rebate or low cost installation
- ▶ Dedicated, professional project management and free site office connection
- ▶ Open access networks – with a wide choice of service providers

FIRS for Entertainment

Our networks support a Fibre Integrated Reception System (FIRS) for access to satellite and free to air TV services including 3D, HD, SkyQ and On-Demand viewing as well as digital radio. The offsite connection can be made swiftly, even during the construction of the Comms room.

FTTP for Performance

More reliable, dependable and faster than any alternative, Fibre-to-the-Premise delivers the speed and performance unattainable by copper. Even Fibre-to-the-Cabinet (FTTC) relies on copper for the last leg of delivery and is considered outdated. The industry is moving fast, and FTTP is the only solution capable of meeting the needs of modern online lifestyles – both today and into the future.

Health & Safety

A responsible approach...

A critical element of our business is risk management, be that technical, commercial, environmental or health & safety. Our challenge is to adopt a flexible approach that recognises the significance of these risks to our customers, employees and the general public.

We take this challenge extremely seriously and promote a positive health & safety culture at all times. All our connections are completed to the highest safety and quality standards; hazards, near misses and daily site specific risk assessments form part of our safe systems of work.

Management site safety tours are conducted on all our projects to ensure ongoing compliance. All our managers with operational duties are trained to a minimum of IOSH Managing Safely level and all site operatives hold a current Site Safety Proficiency Card.

Our success is not only measured through ongoing monthly audits and statistical analysis of our safety performance but also through the feedback we receive from our employees and customers. Seeking continuous improvement, we have embarked upon our own Safe Actions for Everyone (SAFE) initiative to promote positive behavioral safety.

In both the workplace and on-site, we are committed to upholding strict environmental standards and ensure minimal disruption and environmental impact. We work considerably alongside other contractors, highway users and residents, and are certified to ISO 14001. We are also accredited to BS OHSAS 18001, a framework for occupational health and safety management.
